Mehta, Ashwin Monday, April 28, 2003 4:11 PM STIC-Biotech/ChemLib sequence search

STIC,

Please search the commercial and interference databases for the following from 09/845,849:

1) the nucleotide sequence of SEQ ID NO: 1

2) the nucleotide sequence of SEQ ID NO: 3

My mail room is 9E12, office 9E07, art unit 1638.

Thank you, Ashwin

The FT polypeptide is used in the invention to modulate flowering time in many mono and di-cotyledonous plants. The FT polynucleotide sequence is used for recombinant production of the polypeptide, and as a source of antisense, ribozyme or triplex forming sequences. The FT polypeptide can also be used to raise antibodies and to screen for modulators or cellular binding proteins. The methods of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is the flowering locus T (FT) gene of Arabidopsis thaliana FT regulates flowering in plants by modulating flowering time. For regulates flowering in plants by modulating flowering time. Overexpression of FT results in early flowering, while loss of function mutations or antisense directed to FT causes late flowering. The FT polypeptide has a molecular weight of approximately 20kD, and is located to become 1 management of approximately 20kD, and is located to become 1 management of approximately 20kD, and is located to become 1 management of approximately 20kD, and is located to be compared to the province of the second of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                 This is the flowering locus T (FT) gene antisense polynucleotide construct. This sequence is used in the production of the antisense construct of the invention pSKIO60. FT regulates flowering in plants by commodulating flowering. time. Overexpression of FT results in early commodulating flowering. Time for polypeptide has a molecular weight of conservation to modulate flowering the FT polypeptide has a molecular weight of comproximately 20kb, and is located on chromosome 1. The FT polypeptide is cused in the invention to modulate flowering time in many mono and control to the composition of the polypeptide, and as a source of antisense, ribozyme or triplex forming sequences. The FT polypeptide can also be cused to raise antibodies and to screen for modulators or cellular binding proteins. The methods of the invention allow for the production of crops at any time of year.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Flowering

The method uses a controlling gene functioning in the downstream of a gene under the control of solar radiation to accelerate plant generation using a gene functioning to accelerate the flowering time regardless of solar radiation. The method can control flowering time regardless of solar radiation in the method can control flowering time to a desired period by shortening the juvenile stage. The present sequence represents a specifically claimed Arabidopsis nucleotide sequence, which is used in the exemplification of the present sequence, which is used in the exemplification of the present sequence, which is used in the exemplification of the present sequence.

                                                                           the present invention describes a method to accelerate plant generation and generation accelerated plants. The method uses a controlling gene functioning in the downstream of a gene under the control of solar radiation to accelerate plant generation using a gene functioning to accelerate the flowering time regardless of solar radiation. The method can control flowering time to a desired period by shortening the juvenile stage. The present sequence represents a specifically claimed Arabidopsis nucleotide sequence, which is used in the exemplification

These were identified using primers based on the homologous sequences from A. thaliana, B. napus and R. sativus. They can be used in the production of transgenic field crops whose flowering is regulated and the time of fruiting and harvesting can be manipulated.

It was obtd. from an Arabidopsis expressed sequence tag, clone 129D777. A genomic tfl1 clone (AAT60142) has also been obtd. The wild-type role of the tfl1 gene is to inhibit flowering and to prevent the apical meristem from switching to a floral fate. The tfl1 gene was identified as a homologue of the Antirrhinum centraradialis gene (see also AAT60141). The flowering characteristics of transgenic plants, esp. switching of apical meristem to a floral fate and the timing of flowering, can be manipulated by regulating cen or tfl1 gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antirrhinum majus centroradialis gene and Arabidopsis homologue, Tfll - control switching of apical meristem to floral fate, usef in plant hybridisation and in control of growing season

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뮹
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B
The invention describes a substantially purified or isolated polypeptide CC (I) from a ryegrass (Lolium sp.) or fescue (Festuca sp.) species, such as CC MADS-box (MADS) and MADS-like proteins, CENTRORADIALIS (CEN) and CEN-like CC proteins, APETALA2 (AP2) and AP2-like proteins, Homeo-box proteins (HB) and HB-like proteins, or their functionally active fragments or variants. CC and HB-like proteins, or their functionally active fragments or variants. CC architecture and/or sing (II), is useful for modifying plant life cycles architecture and/or flowering processes, flowering and/or plant. The CC which involves introducing (II), (III) or (IV) into the plant. The CC individual or simultaneous enhancement or downregulation of MADS-box CC gene activities may alter flower, embryo and seed development, e.g., CC enhance or inhibit embryo differentiation and growth or alter flower CC organ identity through conversion of one floral organ in another. CC Manipulation of CEN or HB activity in plants alters the control of phase CC change, flowering time and the number of leaves made before flowering. CC Manipulation of AP2 activity in plants alters flower organ identity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass fescue species, useful for controlling plant life cycles and/or growt

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the number of floral organs and flowering architecture. Manipulation of flowering plant architecture has a wide range of applications such as: inducing male sterility for hybrid seed production; changing flower architecture for enhancing value of ornamentals; delaying flowering in forage grasses thus stopping the formation of less digestible stems and increasing herbage quality; altering flowering time allowing early maturing crops; delaying vegetative phase to increase blomass production; increasing branching to enhanced business in fruit trees; altering plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     size e.g. shorter plant stature; and in blocking flowering and reducing release for allergenic pollen. This sequence represents a contig polynucleotide novel floral meristem identity protein involved in floral development and a potential target for manipulating plant life cycles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 762 BP;

                                                                                                                          밁
                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                               The invention describes a substantially purified or isolated polypeptide CC (I) from a ryegrass (Lolium sp.) or fescue (Festuca sp.) species, such as CC MADS-box (MADS) and MADS-like proteins, CENTRORADIALIS (CEN) and CEN-like CC proteins, APETALA2 (AP2) and AP2-like proteins, Homeo-box proteins (HB) CC and HB-like proteins, or their functionally active fragments or variants: CC vector (IV) comprising (II), is useful for modifying plant life cycles architecture and/or flower and/or inflorescence development in a plant, CC which involves introducing (II), or (III) or (IV) into the plant. The CC individual or simultaneous enhancement or downregulation of MADS-box CC gene activities may alter flower, embryo and seed development, e.g., CC enhance or inhibit embryo differentiation and growth or alter flower CC organ identity through conversion of one floral organ in another.

CC Manipulation of CEN or HB activity in plants alters the control of phase C change, flowering time and the number of leaves made before flowering. CC through conversion of one floral organ in another, leads to a change in the number of floral organs and flowering architecture. Manipulation of CC flowering pant architecture has a wide range of applications such as: CC inducing male sterility for hybrid seed production; changing flowering in CC increasing herbage quality; altering flowering time allowing early conversion branched business in fruit trees; altering plant CC increase for allergenic pollen. This sequence encodes a novel floral converses the stature; and in blocking flowering and reducting CC through conversion involved in floral development and a potential CC through in the floral involved in floral development and a potential CC through in the floral involved in floral development and a potential CC through in the floral involved in floral development and a potential CC through in the floral involved in floral development and a potential CC through the floral involved in floral development and a potential CC through the floral inv

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC protesins, Aperalized, AP2) and AP2-like protesins, (LEM) and CLEM CC and HB-like protesins, or their functionally active fragments or variants. CC Nucleic acid (II) encoding (I), a construct (III) comprising (II), is useful for modifying plant like cycles active (IV) comprising (II), is useful for modifying plant like cycles. CC and/or growth phases, flowering processes, flowering and/or plant, The CC which involves introducing (II), (III) or (IV) into the plant. The CC which involves introducing (II), (III) or (IV) into the plant. The CC enhance or inhibit embryo differentiation and growth or alter flower organ identity through conversion of one floral organ in another. CC change, flowering time and the number of leaves made before flowering them and the number of leaves made before flowering. CC through conversion of one floral organ in another flowering time and the number of leaves made before flowering. CC inducing male sterility for hybrid seed production; changing flower carchitecture for enhancing value of ornamentals; delaying flower carchitecture for enhancing value of ornamentals; delaying flower ing increasing herbage quality; altering flowering time allowing early concreasing branching to enhanced business in fruit trees; altering plant size e.g. shorter plant stature; and in blocking flowering and reduction; changenic pollen. This sequence represents a contig collevel of the control of control involved in floral meristem identity protein involved in floral development and a potential target for manipulating plant life cycles.

New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass fescue species, useful for controlling plant life cycles and/or growt phases

Claim 4; Fig 49; 290pp; English.

The invention describes a substantially purified or isolated polypeptide C(I) from a ryegrass (Lolium sp.) or fescue (Festuca sp.) species, such as CC MADS-box (MADS) and MADS-like proteins, CENTRORADIALIS (CEN) and CEN-like proteins, APETRALA2 (AP2) and AP2-like proteins, Homeo-box proteins (HB) CC and HB-like proteins, or their functionally active fragments or variants. CC vector (IV) comprising (II), a construct (III) comprising (II), or a construct (III) comprising (III), or a construct (III) comprising comprising (III), or a construct (III) comprising companity (III), or a construct the plant. The construct (III) comprising construction (III) comprising comprising construction (III) comprising construction (III) comprising construction (III) comp meristem identity protein involved target for manipulating plant life in floral cycles. development potential

```
flowering plant architecture has a wide range of applications such as: inducing male sterility for hybrid seed production; changing flower architecture for enhancing value of ornamentals; delaying flowering in forage grasses thus stopping the formation of less digestible stems and increasing herbage quality; altering flowering time allowing early maturing crops; delaying vegetative phase to increase biomass production; increasing branching to engage the plant stature; and in blocking flowering and reducing release for allergenic pollen. This sequence represents a contig polynucleotide novel floral meristem identity protein involved in floral polynucleotide novel floral meristem identity protein involved in floral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      which involves introducing (II), (III) or (IV) into the plant. The individual or simultaneous enhancement or downregulation of MADS-box gene activities may alter flower, embryo and seed development, e.g., enhance or inhibit embryo differentiation and growth or alter flower organ identity through conversion of one floral organ in another. Manipulation of CEN or HB activity in plants alters the control of phase change, flowering time and the number of leaves made before flowering. Manipulation of AP2 activity in plants alters flower organ identity through conversion of one floral organ in another, leads to a change in the number of floral organs and flowering architecture. Manipulation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and HB-like proteins, or their functionally active fragments or variants. Function of the proteins of their functionally active fragments or variants. The protein of the p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                       Matches
                                                                                                                                                    Query Match
                                                                                                                                                                                                         The present invention provides the nucleic acid and protein sequences of a number of proteins from the strawberry which are involved in the regulation of flowering. These were identified using primers based on the homologous sequences from A. thaliana, B. napus and R. sativus. They can be used in the production of transgenic field crops whose flowering is regulated and the time of fruiting and harvesting can be manipulated.
                                                                                                                                                                                                                                                                                                                                                 Novel nucleic acid involved in controlling plant flowering processes useful for generating transgenic plants, in particular strawberry plants having altered flowering behavior such as early, delayed or day-neutral flowering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Oeller P, Gutterson
